AULA 26/05 - SISTEMAS DISTRIBUÍDOS

arquitetura em camadas

modelo cliente - servidor

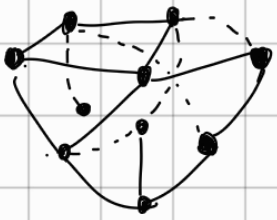

ex.: NFS

peer - to - peer

"pares em pares"

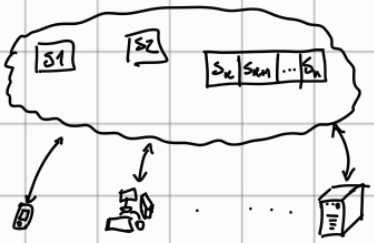

→ todos processos desempenham sendhantemente

→ resistência a falhas

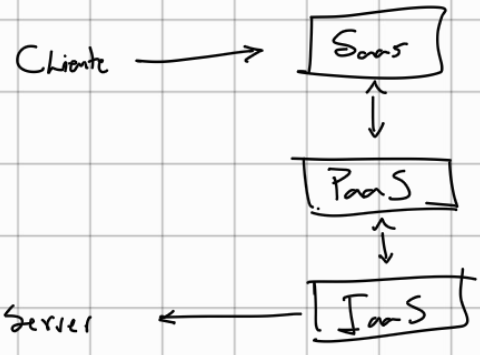

arquiteturas híbridas

computação em nuvem

SaaS e PaaS (platform as a service) e IaaS (infra as a service)

serverless

- serverless
- server contínuo
- não utilizado

tarefa computação sem servidor
